PREFACE.

The Author had published in the year 1851 a work in Guzerati containing Tables of Exchange, and of Shipments of Cotton, Bullion, &c., in connexion with the China and India trade.

The success which attended the work led the Author in 1860 to publish a larger Volume, which comprised several important tables in connexion with the trade between India and England such as those relating to Shipments of Cotton and Seeds from Bombay to England, Silver from England to India, Sugar from Calcutta to England, Freight Measurements, &c.

The Author's second publication having also been favourably received, he has been emboldened to present it now in an English dress with extensive additions and improvements.

The tables of Shipments of Cotton from Bombay to England have been entirely recast and much extended to meet the requirements of the present times, when the article has attained an enormous value in consequence of the breaking out of the American war.

All Cotton tables hitherto published gave the price of Cotton laid down in London or Liverpool exclusive of Freight, which required to be added separately. This desideratum the Author has supplied in the present Edition; and although the tables have thereby extended to ten times the space of the old ones yet the cost of a Cotton Shipment under the new arrangement can be ascertained at one glance,—a facility which he trusts will be duly appreciated by the Commercial Community.

NOTE.

In finding the value of Cotton per lb. at a difference in Exchange of $\frac{1}{16}$ th of a Penny, first find the difference of Decimals at similar Costs in Rupees between two intermediate rates of Exchange, as given in the Tables, and add one-fourth of that difference to the Equivalent of the minor Exchange for every $\frac{1}{16}$ th of a penny.

For Example.—It is required to find the Cost per lb. of Cotton purchased at Rupees 350 per Candy, including all charges, at Exchange $2s. 0\frac{9}{16}d.$ per Rupee and Freight at £ 3 per Ton.

Note.—If it be required to find out Cost per lb. laid down in London or Liverpool of Cotton purchased at a rate exceeding Rs. 638 mentioned in the following Tables for every additional difference in rate of Rs. 2 per Candy, add the Equivalents shown in the above Table at different Exchanges to their corresponding Equivalents in the first mentioned Tables.

For Example.—Required the Cost per lb. of Cotton including all charges purchased at Rs. 708 per candy, at Ex : 1s. 11d. per Rupee and Freight at £ 1-0-0 per Ton. This would be 35 times the difference mentioned in the above Table for that Exchange; that is, $35 \times \cdot 061462 = 2\cdot 1511d.$ This added to its corresponding Equivalents in the following Tables for Rs. 638 which is 20·04d. gives 22·19d.
